BRIEF OVERVIEW OF THE PROJECT

- Console-based e-commerce system built in Java
- Supports buyers, sellers, and admins
- Buyers can browse products, order, and review
- Sellers manage listings and view feedback
- Uses file-based storage for simplicity and future expansion

FEATURES

User Management

- Supports Buyer, Seller, and Admin roles
- User registration, login, and profile management
- Admin can ban, unban, or remove users

Product

- Sellers can add, update, and remove products
- Products are linked to seller accounts
- Buyers can browse available products

Order,Cart and Payment

- Buyers can add products to a cart
- Order history tracking
- Payment handling (simulated / file-based)

Additional

- Review system for buyer feedback on products
- Admin moderation and system control
- No database or GUI — fully console-based
